Let's go!

Message from our CEO

Beyond the Numbers

As we reflect on FY2023, it is evident that we have traversed another unprecedented year, filled with remarkable shifts in the salary landscape. Salaries have mostly flatlined, with some areas experiencing a decrease in total compensation (industry specific) compared to the previous year. This compensation softening can be attributed to various factors, including the normalisation of internal talent salary levels from FY2022, and a reduced appetite for organisations to stretch their budgets to accommodate external candidates' salary expectations. Global market conditions have played a dominant role in influencing this adjustment, leading us to anticipate a focus on specific areas in FY2024 including:

- Increased hiring in Data & Analytics, especially in governance;
- The expectation of doing more with less resources;
- A cost-centric environment with careful consideration of resources; and
- Emphasis on high value specialist skills over generalised proficiencies.

Organisations and their employees are approaching this transitioning market from significantly different perspectives which is causing growing frustrations. Organisations (broadly speaking) are looking for employees to return to the office environment, while expecting employees to do more with less resources given the market conditions. At the same time, job seekers and employees are expecting to maintain fully flexible work conditions, they are becoming increasingly resentful of taking on more responsibilities without additional

Victoria Butt

Founder | CEO | Executive Search
Parity Consulting
vbutt@parityconsulting.com.au

financial incentives. These trends have played out in our survey results, showing 80% of professionals are open to new roles and nearly 70% feel underpaid.

External 'quiet hiring' has seen a significant increase in the latter part of FY2023 and this is anticipated to become even more prevalent in FY2024. Organisations are replacing critical talent to ensure they can execute on their corporate strategy. Hiring internal talent 'quietly' is considered a positive step for resource planning and career development. However, hiring external talent without publicising the role and giving internal employees the chance to apply, causes feelings of discontentment and can lead to a lack of psychological safety.

With increased scrutiny on budget spending and conservative growth projections, organisations will be looking for creative ways to retain key employees.

Employees who wish to seek benefits 'beyond the numbers' may consider requesting:

- Career development
- Additional annual leave
- A compressed work week

To navigate these dynamic circumstances, we have compiled this comprehensive FY2023-24 Salary Guide & Predications resource that amplifies the voices of over 6,000 participants. This Salary Guide provides insights into current compensation trends, the sentiment surrounding pay, and the factors that motivate employees and job seekers. For the past 8 years, our Product, Marketing, Digital and Data & Analytics communities have relied on this guide with confidence and trust, recognising its credibility and value.

Please always reach out to my team or I if we can assist you further.

Warm regards,

Victoria

Top 4 Macro Trends

1

OPTIMISATION FOR AI

Improve your chances of being selected

Artificial Intelligence (AI) is playing an increasingly larger role in shortlisting professionals for vacant roles.

Candidates will need to revisit their CV, cover letter and LinkedIn profile to ensure it is keyword optimised for AI and bot selection tools.

2

T-SHAPED WINS

Organisations prefer broad & deep expertise

Organisations are preferring candidates with both broad and deep expertise.

This is in the hope they can excel in their specialist field while contributing within cross functional teams to understand the larger picture and business-wide challenges.

3

ADAPT TO THRIVE

Evolve, learn and embrace change

Professionals who can adapt, embrace change and adjust their strategies/ approaches to challenges are being highlighted for internal business opportunities.

Interview processes are focusing on examples of adaptive working styles and willingness to learn.

4

PROFESSIONAL BRAND

Relationships and reputation drive success

Candidates who are highly regarded and well networked are being approached for positions which are 'off market' (not advertised or open to a large pool of candidates).

This can mean there is less competition, and shorter selection and recruitment processes.

Parity Predicts

Existing employees and job seekers will question organisational values to ensure they are aligned to their own in the new post-Covid work era. We predict the following:

Prioritising Flexibility

Long-term work conditions are being questioned

Employees and job seekers want to feel confident that their working conditions will not change in the future, and that there will not be increased pressure of a mandated return to the office policy. There will be a rise in requests for the 4-day work week and outcome based working arrangements.

UEVP

Unique Employee Value Propositions are on the rise

Employee Value Propositions (EVPs) are highly valuable to employees and job seekers. There will be a move towards Unique Employee Values Propositions (UEVP) which are tailored for each employee's individual needs.

Increased Competition

Fierce competition for roles driving quality hires

With vacancy levels down by over 30% from May 2022 – May 2023 (ABS) and redundancies on the rise, there is a surplus of job seekers actively looking for employment.

This will drive higher application numbers and more robust hiring processes to secure the best talent with the perfect skillset.

Remuneration Power Shift

Organisations will increasingly say 'no' to pay rise requests

FY2022 saw between 25-30% salary increases and this has mainly flatlined in FY2023. FY2024 will see organisations cut costs and streamline roles with less budget. Therefore, salaries will likely stay flat for the year ahead.

PREDICTIONS – Product

TRADITIONAL PRODUCT PRACTICES ABANDONED

Financial Services will follow digitally lead organisations and move product practices to project based initiatives.

Traditional product management teams will disintegrate and their roles will be reshaped and rescoped into agile (or equivalent) based working.

This shift will encourage traditional Product Managers to upskill/re-train and will create opportunities for cross-functional career development.

MULTI-SKILLED PRODUCT MANAGERS IN DEMAND

Product Managers with skills in Data/Analytics, Pricing, UX/UI, and/or Design will be in high demand as employees and their teams are increasingly asked to do more with less.

Deep expertise across 3-4 different functions which surround product will be expected.

Ability to think strategically as well as be involved in the detail will be essential for some organisations.

DATA-LED NPD ON THE RISE

Inherently, New Product Development (NPD) budgets decrease in line with softening markets, however FY2024 will be a significant year for NPD spend.

The concept phase will be incredibly robust and NPD will be data and analytics lead.

Organisations will be looking for innovative product professionals who can work cohesively with data teams to monetise legacy data for commercial outcomes.

“

***It's an exciting time** for Product as the function will lead the charge in areas such as Commercial Growth, Business Transformation and Strategy.*

PREDICTIONS – Marketing, Communications & Digital

INSOURCING EXPERTISE & RETAINING IP

Organisations will move back to an insource model to control cost and keep their expertise and IP in-house.

In addition, fewer generalist marketing roles will be required.

Therefore, professionals will either be required to upskill or quickly adapt to the growing need for deep specialist expertise and digital capability.

DATA DRIVEN MARKETING (GROWTH MARKETING)

Marketers with data skills will be in high demand as organisations continue to prioritise funding into data driven marketing campaigns.

Utilising legacy data for future marketing campaigns, coupled with the governance of this data will remain a key focus in FY2024.

RISE OF INTERNAL COMMUNICATIONS

Business transformation, cost cutting and the future of flexible working for employees will see increased importance of effective internal communications.

Priorities will include talent retention and engagement, UEVP delivery and promotion of organisational values.

“

By embracing innovation, staying adaptable and understanding the pulse of consumer behaviour, change can be embraced with confidence across dynamic industries.

PREDICTIONS – Data & Analytics

AI REVOLUTION & OPTIMISATION

Generative AI adoption has witnessed significant growth, empowering organisations with insights for enhanced decision-making, and unlocking new opportunities for innovation and efficiency.

This will lead to increased demand for organisations to adapt business models with AI optimisation.

DATA GOVERNANCE

The Emergent AI revolution has made organisations realise the need for Data Governance to manage AI risks and data breaches.

The need for robust security frameworks to manage and protect the data assets, while addressing privacy concerns will be the first priority going forward.

DATA EVOLUTION WILL OUTPACE SKILL SUPPLY

Current data and AI progress rate and evolution are outpacing the knowledge base available on the market.

Skilled data professionals with expertise in Chatbots, NLP, ML, Research, and AI will be in great demand.

Recruitment of AI Researchers, Data Architects, Data Governance Leads, Data Stewards and Data Modellers will see significant growth.

“

As the demand for data-driven decision making and generative AI continues to grow, ethical considerations and sustainability will be one of the key trends that Data & Analytics (D&A) leaders will follow this year.
